The Philosopher's Stone for Sustainable Industry Mitsuki Shimomura 2012-09-19 Industrial Product-Service Systems (IPS2), which is defined as "an integrated industrial product and service offering that delivers value in use," has expanded rapidly over the last decade. IPS2 has allowed us to achieve both high added value and high productivity and has enriched our QOL by improving the performance of products and services. We are now struggling with many awkward issues related to sustainability, but IPS2 is expected to be the "philosopher's stone" for solving these issues. From the pattern of conferences held in Cranfield in 2009, Linköping in 2010, and Braunschweig in 2011, the fourth International CIRP Conference on Industrial Product-Service Systems, held on November 8-9, 2012, in Tokyo, will cover various aspects of IPS2. Topics planned for this year's conference reflect the latest IPS2 information in both the natural sciences and humanities and include case studies from various industries. IPS2 is still a relatively new field, so it is important to keep the entire context in order to promote more cross-sectional cooperation between multimodal disciplines. The fourth International CIRP Conference on Industrial Product-Service Systems will serve as a vital platform for such collaborations and the discussion of new scientific ideas.

Electronic service delivery in the driver, vehicle and operator agencies in Great Britain. Great Britain: National Audit Office 2008-01-16 The Driver and Vehicle Licensing Agency, the Driving Standards Agency and the Vehicle and Operator Services Agency provide services for 42 million drivers, the keepers of 36 million vehicles, 100,000 commercial vehicle operators and 19,000 authorised MoT businesses in Great Britain. The services include issuing driving licences and vehicle registration documents and conducting driving and Heavy Goods Vehicle and Public Service Vehicle roadworthiness tests. The Driver and Vehicle Licensing Agency is also responsible for collecting Vehicle Excise Duty, which raised £5 billion in 2006-07, working with a range of stakeholders.

as the police, to enforce collection of this Duty. The Agencies handled some 124 million customer transactions in 2006-07 for the range of services which could be made available electronically. This report examines six of the 15 services available electronically, in which the Agencies have invested at least £60 million to improve access and service delivery. The services accounted for 12.6 million electronic transactions in 2006-07: applications for provisional driving licence; booking of driving tests (both practical and theory); taking driving theory tests; upgrading from a provisional to a full driving licence; buying car tax or making a Statutory Off-Road Notification; and changing records of commercial vehicle operators. The Agencies' investment of some £60 million in new technology to improve access and delivery of five of these services, and their further investment in services for booking and taking the driving theory test, have made the services easier and quicker for customers to access and less burdensome to use. After taking account of the development of other services should also lead to savings of at least £33 million but to achieve these take-up must be encouraged and some aspects of the services must improve.

The Primary ICT & E-learning Co-ordinator's Manual by Les Wright 2007-05-23 [This book is] absolutely wonderful. It will be my new Bible... I have used it loads already in preparation for my Mark assessment. Taking on the role of ICT co-ordinator can be quite a daunting task but this step guide, breaking things down into manageable chunks will be very supportive. I love the book's idea - the comments made by the characters are very realistic. This is just what new co-ordinators need, I wish I'd had this when I took over co-ordination of ICT! - Christine Beedham, Primary ICT adviser, Warrington Every primary school has the daunting task of embedding ICT and e-learning into their curriculum. This practical manual is the first part of a two volume set that together make up a detailed two year training programme for primary ICT and e-learning co-ordinators. The books combine key strategies and information with a weblog discussion from a group of 'virtual' co-ordinators who share their problems, fears and successes over the two-year programme, based on the author's wide experience of working with new co-ordinators and experienced staff on training programmes and in general support. Book 1 is designed specifically for co-ordinators new to the role who need starting points and broad support. It presents a structured training programme split over three terms, guiding co-ordinators through the key stages of developing and implementing ICT in the school and practice, including: o auditing existing school systems o reviewing and revising the school's strategy for ICT o reviewing the ways in which ICT is used as a teaching and learning tool across the curriculum o examining methods for the management of technical support services o establishing a clear overview of standards in ICT, including a review of assessment procedures, moderating and monitoring teaching and learning and creating E Portfolios. The books have a companion website which will offer downloadable versions of the photocopyable sheets from the book, as well as other sources of help and advice.

The Limitless City by Oliver Gillham 2002-03 One of the great debates of our time concerns the

predominant form of land use in America today -- the all too familiar pattern of commercial and residential development known as sprawl. But what do we really know about sprawl? Do we know what it is? Where did it come from? Is it really so bad? If so, what are the alternatives? Can anything be done to make it better? The Limitless City offers an accessible examination of those and other questions. Oliver Gillham, an architect and planner with more than twenty-five years of experience in the field, considers the history and development of sprawl and examines current debates about the issue. The book: offers a comprehensive definition of sprawl in America traces the roots of sprawl and considers the factors that led to its preeminence as an urban and suburban form reviews the negative impacts (loss of open space, increased pollution, gridlock) as well as its positive aspects (economic development, personal freedom, privacy) considers responses to sprawl including "smart growth," urban growth boundaries, regional planning, and the New Urbanism looks at what can be done to improve and counterbalance sprawl The author argues that whether we like it or not, sprawl is here to stay, and only by understanding where it came from and why it developed will we be able to successfully address the problems it has created and is likely to create in the future. The Limitless City is the first book to provide a realistic look at sprawl, with a frank recognition of its status as the predominant urban form in America, now and into the near future. Rather than railing against sprawl, Gillham charts its probable future course while describing critical efforts that can be undertaken to improve the future of sprawl and our existing urban core areas.

Active Technologies for Network and Service Management Rolf Stadler 2003-07-31 This volume of the Lecture Notes in Computer Science series contains all papers accepted for presentation at the IFIP/IEEE International Workshop on Distributed Systems: Operations and Management (DSOM'99), which took place at the ETH Zürich in Switzerland and was hosted by the Computer Engineering and Networking Laboratory, TIK. DSOM'99 is the tenth workshop in a series of annual workshops, and Zürich is proud to host this 10th anniversary of the IEEE/IFIP workshop. DSOM'99 follows highly successful meetings, the most recent of which took place in Delaware, U.S.A. (DSOM'98), Sydney, Australia (DSOM'97), and L'Aquila, Italy (DSOM'96). DSOM workshops attempt to bring together researchers from the area of network and service management in industry and academia to discuss recent advancements and to foster further growth in this field. In contrast to the larger management symposia IM (Integrated Network Management) and NOMS (Network Operations and Management Symposium), DSOM workshops follow a single-track program in order to stimulate interaction and active participation. The specific focus of DSOM'99 is "Active Technologies for Network and Service Management," reflecting the current developments in the area of active and programmable networks, and about half of the papers in this workshop fall within this category.
